## Tattoo Aftercare

Tattoos on average take 7-10 days to heal. For best results, continue using lotion and sun block daily. UV rays will compromise the integrity of your tattoo. One good sunburn can fade your artwork dramatically!

- Leave bandage on overnight for first night
- Gently remove bandage in the morning
- Soak area in a hot bath/shower to allow pores to open
- Gently wash with mild soap, e.g. Dial or Ivory
- Use only unscented, mineral oil free, retinol free lotion (For best results we recommend “Saunders Custom Tattoo Whipped Shea Moisture Cream”)
- Apply lotion two or three times daily
- DO NOT pick or peel tattoo during healing process. (if itching occurs pat softly)
- DO NOT go in chlorinated or salt water. Avoid stagnate water as well.
- DO NOT expose tattoo to direct sunlight while healing.

Following these instructions will ensure that your tattoo will look brilliant for decades to come.

If you have any questions about tattoo aftercare contact us and we will be happy to answer any of your questions.
